## Action Saw & Abrasive Products

### **SPECIAL one time SALE** CORRUGATED 16-60 KNIFE STEEL

- T1 steel is a high speed machine grade steel used in the creation of Knife steel and tool bits. T1 high speed steel can withstand higher temperatures than other steel alloys, allowing them to work at higher speeds (hence the name) and cut faster. This makes T1 knife steel ideal for high speed planing of straight knives for moulders in which products must be pushed through the line quickly in order to lower cost and maintain output.
- M2 HSS steel is great for both long and short runs in soft and hardwoods. Better wear resistance with a RC 61-63 hardness.

- Premium M2 & T1 HSS Grade
- Crush ground corrugations 16-60
- RC 61-63 hardness
- Trouble free long run performance
- Better wear resistance
- 25" standard bar length

Part number	Width	Thickness	Grade	Qty available	Sale Price
2511214	1-1/2	1/4	M2	33	52.50
